EXPERIENCE

Consultant

Jun 2023 - Present

Analyst

Jul 2021 - May 2023

Deloitte Consulting, LLP | San Jose, CA (Remote)

- Successfully completed a rigorous 4-week Cloud Institute Development Program, mastering Docker and Kubernetes, resulting in AWS certification achievement
- Spearheaded the Deloitte Experience SRE Interview Prep Bootcamp Program and pioneered the Infra SRE Padawan Upskilling Program, demonstrating leadership and innovation in skill development initiatives
- Elevated the functionality of the skill repository application by seamlessly incorporating Single Sign-On (SSO) capabilities, streamlining user access and security.
- Orchestrated the development of a novel survey transformation flow, seamlessly integrating backend API calls, thus enabling a more dynamic and data-driven user experience.

Identity & Access Management Engineer (Semiconductor & Infrastructure Software Supplier Client)

Tech Stack: Internal IAM Platform, Okta, SAML 2.0, OIDC, OAuth 2.0, Identity Provider (IdP) Configuration, Postman, Google Workspace, ServiceNow-style ticketing, Confluence, Jira

- Supported client migration from Okta Workforce Identity to an internal Identity & Access Management (IAM) solution, enabling consolidation of 2,000+ SAML and OIDC applications
- Created and configured new IdP applications to support both standard and custom SSO integrations
- Troubleshot authentication and claim/attribute mapping issues by analyzing IdP configurations and application metadata
- Managed and resolved migration-related tickets within the client's tracking system, providing timely updates and driving issues to closure in collaboration with product and vendor teams
- Partnered with vendor and engineering teams through recurring working sessions to resolve migration blockers and ensure successful cutover
- Led daily office hours to assist application owners with testing, onboarding, and migrating readiness, improving throughput and user adoption

Full Stack Software Engineer (American Financial Service Client)

Tech Stack: Javascript, React, Python, FastAPI, OpenShift, VertexAI, Atlassian SDK, Java, Jira

- Rapidly onboarded to a complete, large-scale codebase and successfully moved the product into production within 4 weeks
- Spearheaded the rollout of an in-house generative AI tool to the client, targeting improved efficiency, productivity, and software quality across the SDLC
- Revamped Dockerfiles for 4 backend service and database streamline builds, enable single-point deployment, and improve developer usability
- Implemented source credentialing using Azure and GCP Workload Identity Federation to enable LLM access via Vertex AI
- Integrated client vaulting libraries to securely retrieve secrets required for authentication workflows
- Conducted comprehensive end-to-end testing of GenAI tool across all development, staging, and production environments
- Fine-tuned system prompts to improve accuracy and relevance of responses from the tool
- Acted as a primary point of contact for a pilot Scrum team, providing support guidance on tool usage

Site Reliability Engineer (Global Social Media Client)

Tech Stack: Golang, Python, Git, React, Linux, In-House Technologies (similar to AWS, Kubernetes, Gitlab), JIRA

- Enhanced US platform's UI and data traffic for complete data independence from the global counterpart
- Created user-friendly front-end deployment documentation, enabling US personnel to autonomously manage upgrades, testing, and rollbacks for the cloud UI platform
- Actively participated in the OnCall rotation, providing crucial assistance and troubleshooting expertise for sub-team owned platforms
- Implemented automated metrics tracking for real-time service monitoring and timely alerts for abnormal activity detection
- Oversaw DevOps CI/CD pipelines, tools, and services, ensuring seamless support for sub-team products
- Established subject matter expertise in Identity Access Management Platform, assuming a leadership role in responding to inquiries and providing on-call support to team members
- Designed an application to identify and address access role gaps for services, proactively notifying users
- Collaborated with the lead on a strategic initiative to boost US ownership of services, successfully increasing it by 90% compared to the previously held share by US counterparts

Full Stack Software Engineer (American Bank Holding Client)

Tech Stack: JavaScript, React, Redux, Jest, Cypress, Golang, AWS, PostgreSQL, Jenkins, Docker, Git, Github, Jira

- Translated legacy Python code to Golang, enabling nightly AWS EMR batch jobs to seamlessly deliver data to downstream consumers
- Innovated application capabilities by crafting a new AWS Lambda-based REST API microservice and enhancing the user interface, harmonizing previously disparate experiences
- Slashed API timeout occurrences by 95% in legacy code through optimized fetch calls and efficient data storage in Redux store
- Empowered a merchant partnership by integrating a rewards feature, including the development of a new API endpoint and React form components
- Diagnosed and resolved production deployment issues for microservices, leveraging an upgraded internal CI/CD pipeline, ensuring on-time MVP release
- Partnered with Agile product team to revamp application features, enabling in-table editing and bulk updates within the UI table, boosting user efficiency
- Recognized with the Goalkeeper award for consistently meeting commitments and providing support to team members
- Strengthened the internal UI framework by submitting a pull request to enhance error handling in a React form component, earning approval from an external team

Front-End Software Engineer

Dec 2020 - Jun 2021

DoktorUp, LLC | San Ramon, CA (Remote)

Tech Stack: JavaScript, React, Ant Design, Git, BitBucket, Trello

- Created a user-friendly appointment widget for external provider websites, allowing patients to easily find open appointments based on their visit reasons
- Enhanced patient appointment booking and check-in experiences by developing a new search feature for insurance information, integrating a backend API, and utilizing Ant Design UI Framework components
- Pioneered personalized provider search using geolocation services to display nearby available providers, improving patient access to care options
- Led the development of a provider application for patient office visit check-in, implementing provider authentication, user session management, and seamless data retrieval from backend endpoints
- Maintained a well-organized gitflow workflow for the application, employing efficient branch methodologies for the introduction of new features and enhancements

PERSONAL PROJECTS

50 State Voyage

Tech Stack: JavaScript, React, Redux, Ruby on Rails, Active Record, PostgreSQL, Git, Github

- Developed a travel and social application during COVID-19 quarantine, facilitating the planning of future visits to any U.S. state
- Seamlessly integrated multiple Google APIs to retrieve business information and display locations, streamlining itinerary creation
- Implemented advanced polymorphic and self-join database tables, enabling intricate user relationships within the application
- Constructed a robust backend following the MVC pattern, providing comprehensive CRUD capabilities across multiple models
- Enhanced security with the incorporation of JSON Web Tokens and BCrypt authentication, storing encrypted user data in localStorage for added protection

EDUCATION

Flatiron School | San Francisco, CA

- Immersive Full Stack Software Engineering Program

University of California, Davis | Davis, CA

- Bachelor of Science - Biochemistry & Molecular Biology

CERTIFICATIONS

AWS Certified AI Practitioner

AWS Certified Developer - Associate
